Hello,

Thanks for this software, simplifies life a lot

For my need of a preview of the report I modified the source and added this:

```
String RepGen::GetResult() {
 String res;

 RepGenReportStart();
 RepGenReportVar();
 if (RepGenCalculateBody) {
  PerformLoopTable("##BT","##ET",tpl);
  PerformLoopPlain("##BP","##EP",tpl);
 }
 RepGenReportFinish.Execute();

 res = tpl;
 return res;
}
```

with borrowed code from ::Perform()
This returns the QTF of the report which I feed to a RichTextView
Maybe you can add it to the source

regards

edit: it can probably work without variable "res"
