Hello Koldo,

Can you add also following if statement at the end of GetCpuTemperatureHWMON function?  
Dividing by zero can be painful. This situation can occur when hwmon subsystem does not exist!

```
if (!temps.IsEmpty())
    return sumTemps / (double)temps.GetCount();
else
    return Null;
```

P.S.

Now, I am looking for optimal path for hwmon.

Sincerley,  
Klugier
