Hi,

I think that Sergey's answer would be better than mine

You can find interesting details about code128 subformats in Wikipedia.

About generating Code 128 with .net control, it's not really the subject here ! Sergey's approach has the big advantage to be compatible with any OS supported by UPP, and as shown by this poll, almost a half of UPP developpers don't use Windows, and several using Windows use also another OS and want to make portable applications...

If you think that developping some .net controls could be interesting, you should open a new subject.
