Subject: Some small ide features
Posted by mirek on Fri, 08 Nov 2013 10:58:47 GMT

theide now got Json and XML viewer - it attempts to views current selection or current file (if nothing selected). Somewhat hidden feature: double-clicking on node copies path as series of ["ccc"][...] useable as "path" for XmlNode/Value.

Assist++ now also emulates methods of S_* types (so far it only emulated memner variables).
