Subject: T++ does not work with typedef enum {}
Posted by Didier on Sat, 16 Nov 2013 11:12:32 GMT

Hi,

I am currently trying to write some documentation for my packages and I ran into an issue:
In Topic++, the following codes do not work :

typedef enum FitToDataStrategy {
 ALL_SERIES,
 VISIBLE_SERIES_ONLY
} FitToDataStrategy;

typedef enum {
 ALL_SERIES,
 VISIBLE_SERIES_ONLY
} FitToDataStrategy;

The reference used by T++ is 'typedef' ... the name of the enum is lost and cannot be used

Can this be corrected, it keeps from using T++ correctly
