Subject: Code that needs to be internationalized

I found some code that produces error messages in Czech. These should have the t_("English version") syntax.

SqlCtrl/SqlDlg.cpp:

database"));

Searching in all files for "Chyba" (error) results in:
C:\upp\uppsrc\Core\Util.cpp(737): MessageBox(GetActiveWindow(), *this, "Chyba", MB_OK);

"\1.");

souboru .", recent_export));

filename + "'.");

+ filename + "'.");
C:\upp\uppsrc\TCore\help.cpp(153): out = NFormat("Chyba: ", e);

textu:\n%s", e, out);
C:\upp\uppsrc\TCtrlLib\Help\DlgHelp.cpp(834): if(!PromptOKCancel(NFormat("Chyba v souboru

C:\upp\uppsrc\TCtrlLib\Help\DlgHelpEdit.cpp(1134): Exclamation(NFormat("Chyba v souboru : %s", ~fsel, e));

C:\upp\uppsrc\Web\TServ\tserv.cpp(737):   puts("Chyba: " + e);

C:\upp\uppsrc\Oracle\Oci7.cpp(748): SetError("Nelze spustit knihovnu OCI7 pro

C:\upp\uppsrc\TCore\CalcBasic.hpp(978): "s chybou]]\r\n"

2.718281828.]]\r\n")

souboru";

If I knew Czech, I would be glad to fix it... but I have no clue what most of this says.
