Here is a screenshot showing the DLL in the VS object browser.  As you can see, it has a whole host of classes within it.  One of those classes is the PP_ComLib_WrapperClass (not in screenshot range).  Unfortunately, I am unable to attach the VS project here as the ZIP file refuses to upload even though it is under the limit of 8192kb.  I can reference the DLL either by VS C++ or VB6 by setting the Project->Reference to the DLL.  I will try again to upload the VS project.
