Hello slashupp

For me following command do the trick:

```
make -f mkfile PKG=ide FLAGS="GUI X11 MT SSE2" ECHO=1 e= TIME=
```

P.S.

Flag ".NoGTK" dosen't turn off GTK backend! (Use X11 insted of it).

P.S 2

After compiling Ide the new binary version can be found in following dir: `_out/bin/ide` (Just copy it to your standard upp dir and rename executable to "theide")

Sincerely,
Klugier
