aroman wrote on Wed, 26 July 2006 03:54I didn't actually read all the way through your post, I
noticed this:

sql * Insert(TABLE)(C0, "a")(C1, 1)(C3, 2)
if(duplicate())
  sql * Update(TABLE)(C0, "a")(C1, 1)(C3, 2)

In sqlite, at least, you can use "REPLACE" to insert or update. According the the sqlite
documentation, it's also in mysql:
http://www.sqlite.org/lang_replace.html

Perhaps that should be added to the sql interface.

=)

It is not only about sqlite3 MS SQL Server (which I use in my projecte doesn't have such a
possibility (or I missed sth..)
But for example in MySql there is Insert into... on duplicate key update or sth similar.
