Actually I managed it by using two GridCtrl side by side using splitter. And on scroll I shift other control also. I wanted fixed columns.

```
FixedColGrid.sby.WhenAction = THISBACK ( Scroll );
```

```
void Scroll() {  
    int u1 = FixedColGrid.sby.Get();  
    ProcessGrid.sby.Set ( u1 );  
}
```

Similar thing will be possible for vertical placement of two grids using splitter.

Hope this may use useful.

Deepak
