Subject: Re: Splitting a single ctrl (or appearing to)
Posted by deep on Sun, 12 Jan 2014 09:22:47 GMT

Actually I managed it by using two GridCtrl side by side using splitter. And on scroll I shift other control also. I wanted fixed columns.

FixedColGrid.sby.WhenAction = THISBACK (Scroll);

```
void  Scroll() {
 int u1 = FixedColGrid.sby.Get();
 ProcessGrid.sby.Set ( u1 );
}
```

Similar thing will be possible for vertical placement of two grids
using splitter.

Hope this may use useful.
