Hi all,

I just delivered some new modifications:

** Added FULL KBD support

Added KBD shortcut for: for UNDO/REDO & COPY

Added LEFT/RIGHT/UP/DOWN scroll KBD actions

KBD shortcuts for context menu

** Added AUTO-HIDE feature : When using `AutoHideElementCtrl<BASE_ELEMENT>` template the `GraphElement` Hides once the mouse is not on it

==> this brings the possibility of adding tools on graphs that do not parasite the visual aspect of the graph

The `GraphCtrl_test` application has a working example of the AUTO-HIDE feature
