Hello,

Error dialog API is now available in the lastest U++ version.

List of new functions:

```
void ErrorOK(const char *qtf);
int ErrorOKCancel(const char *qtf);
int ErrorYesNo(const char *qtf);
int ErrorYesNoCancel(const char *qtf);
int ErrorRetryCancel(const char *qtf);
int ErrorAbortRetry(const char *qtf);
int ErrorAbortRetryIgnore(const char *qtf);
```

Example:

```
GUI_APP_MAIN
{
    ErrorOK("Fatal error: connection interrupted!")
}
```

Above functions work exactly the same way like "Prompt" family functions.

Sincerely,
Klugier
