Hi,

there is a heap leak in SysExec.cpp originating from not freeing argv and envv pointers at the end of SysExec function.

In addition I propose to introduce a flag DELETE\_TMP\_FILES or something similar to delete created tmp files when SysExec finishes. The reason for this request is that I have a program that repeatedly calls SysExec and therefore the directory containing tmp files ends up unnecessarily containing a lot of them.

The proposed patch is attached.

[edit] Wherever BuildArgs or BuildEnv are called the pointers need to be freed e.g., also in SudoLib.cpp.

Regards  
Matthias
