SqlCtrls:

```
bool    Load(Sql& sql, SqlSet set)          { sql * set; return Fetch(sql); }
#ifdef NOAPPSQL
bool    Load(SqlSet set)                    { return Load(SQL, set); }
#endif
bool    Load(Sql& sql, SqlId table, SqlBool set);
#ifdef NOAPPSQL
bool    Load(SqlId table, SqlBool set);
#endif
```

Instead of

```
SQL * Select(ctrls).From(TABLE).Where(where);
ctrls.Fetch();
```

which is very common in my code, you can now write

```
ctrls.Load(TABLE, where);
```
