Possible solution:

```
void testclose::DoClose()
{
    static int cb=0;
    if (!cb) { cb=1; SetTimeCallback(10, THISBACK(DoClose), 0); }
    else Close();
}
```

The PostCallBack(..)-function does the above but with a 1 ms delay
and my version just increases that time-out value.
This seems a cleaner way than calling Break() (- the word 'break'
sounds like things won't end nicely
