Hi Honza,

I installed it on both Windows and Ubuntu Linux. As you say, it already works on Linux. There are many warnings though when compiling upp, but the executable works.

On windows it seems that compilation completes, but not linking. I guess a custom builder for clang is needed to address correct linker with correct parameters on windows. (I did not have enough time to figure this out properly, hence the guess..) Maybe we just have to wait a couple of clang releases to have this all sorted out by the clang team.

I'm dreaming about having a clang cross compiler environment with upp, targeting both Linux and windows. Maybe others over time...

Best regards,

Tom
