slashuppah! now I'm starting to get the picture ...

The reason I need get rid of GTK is that I have build (B)LFS with minimal extras, only X11 with openbox for window managementOk, that brings more sense into what you're trying to do

Quote:Can I add these flags to 'make -C uppsrc' in the domake script?Unfortunately, some things are pretty hard-coded in the makefile I would recommend you to rather use the universal makefile. Just download the file, put it in the directory with unpacked sources and run this:make -f mkfile PKG=ide NESTS=uppsrc LDFLAGS="-Wl,--gc-sections -Wl,-O,2" TIME= COLOR=0 USEMAINCFG=0 FLAGS="GUI NOGTK GCC" TARGET=\$(pwd)/theide JOBS=5

This should build theide without GTK. You can also use this for any other U++ package, just by tweaking the parameters a bit. Detailed documentation is inside the makefile.

Best regards,
Honza
