thx Didier

for confirming ... I will now also switch to the 6/12/2013 - version as that seems to be a ok one

PS: I (again) tried Qt, wxWidgets(with codeblocks) in the meantime, and

realized (again!) why theide is so much better for GUI-development.

(There just isn't any alternative once you started using theide, it spoils you - it's so easy, intuitive, right, )

EDIT:

seems the nightlies start at earliest 22 Jan 2014

is there a way I can get earlier versions?
