Subject: Curious code in GtkEvent.cpp
Posted by Oblivion on Sun, 16 Feb 2014 23:19:51 GMT

Hello,

While I was investigating a problem with trayicon example in gtk backend (not working, more specifically, blocking the UI, if trayicon is put into its own event loop as in the reference example, by the way), I saw the below code block.

```
  case GDK_FOCUS_CHANGE:
  if(p) {
   if(((GdkEventFocus *)event)->in)
    gtk_im_context_focus_in(p->top->im_context); // <------ line 126
   else
    gtk_im_context_focus_in(p->top->im_context); // <------ Same as line 126
   AddEvent(user_data, EVENT_NONE, value);
  }
  return false;
```

I am not very familiar with GTK event handling system; Is this normal?

Regards.
