Thank you for the explanation Oblivion!

Update:
After installing the windows sdk and set up the directories like it was suggested I get a new error:

C:\Program Files\Microsoft SDKs\Windows\v7.1\Include/specstrings.h:11:17: fatal error: sal.h: No such file or directory
 #include <sal.h>

Google says me that this is a lib of Visual Studio and everybody recommend to use the Visual c++ compiler for windows applications, instead of mingw. So at this time I'm downloading Visual Studio Express, which leads me to the next question related to this topic:

Where is the advantage to use Ultimate++ when I have to use a Visual C++ compiler? Is my Code really platform independed?

Thanks again!
