Hi I just uploaded some new fixes.

I recommend to update to this version if you are using it : it contains some uninitialized data fixes.

Complete modifications are listed below :

05/03/2014 - SVN.6999

- * Corrected some initialized vars issues.
- * Added missing setGraphSize() methods (regression since hierarchy refactoring)
- * Added some predefined Graphs usable in GraphDraw (no need to be Ctrl)
- * Added ChangeStatus class to introduce change management in some parts of code
- * Renamed + Refactoring GridSteplterator.h ==> GridStepManager.h + GridStepManager.cpp
- * Refactoring : code simplification : replaced all TypeGridStepManager::lterator with GridSteplterator
- * Corrected GetImage() regression ==> grid is now correctly resized according to scale

It took me quite hard time to correct the GetImage() regression because some Size() variables were not initialized ...

I didn't noticed before that the default constructor Size() does NOT initialize internal members ..This of coarse making unpredictable behavior ...

The automatic grid adjustment (taking in account text size) now works quite well, if anyone stumbles on a corner case I'll be happy to hear about it
