Hi I just uploaded some new fixes.

I recommend to update to this version if you are using it : it contains some uninitialized data fixes.

Complete modifications are listed below :

05/03/2014 - SVN.6999

-----

- \* Corrected some initialized vars issues.
- \* Added missing setGraphSize() methods (regression since hierarchy refactoring)
- \* Added some predefined Graphs usable in GraphDraw (no need to be Ctrl)
- \* Added ChangeStatus class to introduce change management in some parts of code
- \* Renamed + Refactoring GridSteplerator.h ==> GridStepManager.h + GridStepManager.cpp
- \* Refactoring : code simplification : replaced all TypeGridStepManager::lterator with GridSteplerator
- \* Corrected GetImage() regression ==> grid is now correctly resized according to scale

It took me quite hard time to correct the GetImage() regression because some Size() variables were not initialized ...

I didn't noticed before that the default constructor Size() does NOT initialize internal members ..This of coarse making unpredictable behavior ...

The automatic grid adjustment ( taking in account text size ) now works quite well, if anyone stumbles on a corner case I'll be happy to hear about it
