After different trials I had some success with git-svn-mirror

It's a ruby gem, could ruby be installed on the server ?

I'm currently pushing the code to https://github.com/ultimatepp/upp do not expect something before half an hour, I'm ~20% (60MB) for now.

I'll set up and test the CRON for a few days on my side and will put the details if I can get everything working.

Cheers,
Vic
