Hi,

I gave a try to new debugging code on a simple program with a memory leak:

```
#include <Core/Core.h>

int main(int argc, const char *argv[])
{
 Upp::MemoryBreakpoint(628);
 int *ptr = new int(1);
 ptr = new int(2);
 delete ptr;
 return 0;
}
```

Ide crashes with "Parse error". It makes debugger useless for tracking memory leaks.
