Ok, I narrowed it down a bit.

There seems to be a problem when more than 1 flag is added in the same line. I added the portaudio package to a random project and hit compile without adding any extra flags to the main configuration.

On windows with msc9 this gives a warning "unrecognized sourfile type WASAPI" because the second flag WASAPI is passed directly to the compiler. On linux it generates an error, not a warning.

See attached picture.
