Now that you've mention the mouse freeze, I also experimented that and today using the svn update from TheIde it also freezes when doing the update, for a while I could do nothing with my computer.

Specifically it grabs the mouse globally when accessing the network and freeze till it completes. I'm on a linux lubuntu 12.04.

Also when applying "overwrite" I do not have a working keyring setup and the message saying that goes to the overwrite, making the code invalid.
