Take a look at this thread:

http://www.ultimatepp.org/forums/index.php?t=msg&th=7545 &goto=39562&#msg_39562

You have to create function body and register it:

```
Value translate(const Vector<Value>& arg, const Renderer *)
{
  if(arg.GetCount() == 1 && IsString(arg[0]))
    return GetLngString(GetCurrentLanguage(), (String)arg[0]);
  return arg[0];
}
```

```
INITBLOCK {
  Compiler::Register("t_", translate);
};
```

And after that you can use it in witz:

```
$t_("some text")
```
