Subject: Skylark: Should escape character '\$' be replaced to avoid name clash with JQuery?

Hi,

when designing witz templates, I have made a mistake, seduced by similiarity with Shell/PHP, I have used '\$' as designation of code sections.

This has unfortunate consequence in name clash with JQuery.

Perhaps, in this still early stage of Skylark maturing, we could change this and use e.g. '@' instead. I would made support for '#' as option so that older code does not need to be fixed immediately.

What is your opinion?

Mirek

Skylark/WITH escape char(total votes: 4)
