...little update.

I tried another experiment substituting req.Part(...) with

```
req.Post("file", LoadFile(fn));
```

to upload the zipped file. After a slight modification of the PHP script on the server, the file is uploaded and saved where I want. Unfortunately the server is not able to unzip it. It seems that during the transfer the file lost some encoding and the server is not able to understand how to unzip it :roll: . In fact when I put it back on my computer the unzip no longer work.

If nobody has experience with file upload via U++ I'll try <http://curl.haxx.se/libcurl> .

Thanks,
Luigi
