Hi Koldo,

I did try PainterSvg_demo. I changed the file demo.svg provided there and appended the path of
a treble clef with transformation attribute "scale(4.0)". See appended file. Try it with
PainterSvg_demo and see it displayed without scaling. Load it into emacs, for instance and see it
displayed with scaling. Then change the attribute to "scale(4.0,4.0)" and PainterSvg_demo will
display it like emacs.

Regards Manfred
