OK, it's been some time since I've uploaded sources and it's actually no feedback at all.

Did someone find any of sources useful?

Is it complete mess and you just didn't want to dig into such a horrible code?

What are main problems with embedding these classes into your projects?

Are those classes badly organized and used some alien, hardly understandable concepts?

Should we just abandon them? Or any of them worth adding to bazaar?

Please give me some feedback if you spent some time learning the code posted.

Thank you in forward.
