Hi jibe,

I have updated the GCC.bm to contain your changes. It should now work on both architectures.

I don't think this is the right solution in the long term. The file should be generated on the target machine in postinstall hook, or something like that. I'll try to figure that out when I have some more time :) For now, it should be usable.

I'm glad we could make it work, it's been a great cooperation, thanks ;)

Best regards,  
Honza
