I have a CSV file with a lot of informations about cities. How can i read the file and fill my DropDownList with all city names?

Here is an example of CVS: (city names in red)

```
ANDEZENO,(TO),4,0,7.869,45.037,001009,001,01,[color=red]Torino[/color],PIEMONTE
ANDRATE,(TO),4,0,7.875,45.527,001010,001,01,[color=red]Torino[/color],PIEMONTE
ANGROGNA,(TO),2,0,7.225,44.843,001011,001,01,[color=red]Torino[/color],PIEMONTE
ARIGNANO,(TO),4,0,7.902,45.04,001012,001,01,[color=red]Torino[/color],PIEMONTE
AVIGLIANA,(TO),3,0,7.397,45.079,001013,001,01,[color=red]Torino[/color],PIEMONTE
AZEGLIO,(TO),4,0,7.994,45.424,001014,001,01,[color=red]Torino[/color],PIEMONTE
BAIRO,(TO),4,0,7.755,45.386,001015,001,01,[color=red]Torino[/color],PIEMONTE
...
```

Ciao,

I use Split() to separate a String/row/record in several fields and get what I like.
For example:

```
FileIn in(filedbname);
while(!in.IsEof())
{
    String line = in.GetLine();
    Vector<String> fields = Split(line, ","); // , in your case
        String city = fields[0];
        String prov = fields[1];
        //...
        String region = fields[10];
}
```

I hope this is useful for you.
Luigi
