Hi,

I noticed a problem with FileBrowser in Controls4U_Demo, while testing UPP on CentOS and Scientific Linux. I see that I have the same problem with Linux Mint.

When I click to some folders, either in the left or right panel, I have an error message (see the attached screenshot. "Bureau" is french for "Desktop").

Seems that this happens to folders that have no subfolders.

As I'm just testing UPP on rpm-based distros, I didn't investigate more...
