I'm using ubuntu, 6.06 Dapper Drake.
Quote:rbmatt@rbmatt-desktop:~\$ sudo apt-get install libxau6 libxau-dev
Reading package lists... Done
Building dependency tree... Done
libxau6 is already the newest version.
libxau-dev is already the newest version.
0 upgraded, 0 newly installed, 0 to remove and 0 not upgraded.
Tried it with about every combo of build options, all give that error.
I'm going to try a fresh install to see if somehow a detected path was wrong (I did not have all the necessary packages when I first installed).
I'll let you know how it goes.
