slashupp wrote on Tue, 22 July 2014 22:22 How do I setup / enable spell-checking with RichEdit / UWord?

Where can I find us or uk english dictionaries for this?

Thx.

Hi slashupp,

You can download some dictionaries from sourceforge:

<http://sourceforge.net/projects/upp/files/SpellerDictionaryes/>.

To use any of these dictionaries with any U++ application just download the .udc file and save it to a location where the application finds it. The paths searched for dictionaries are:

- scd subdirectory in applications configuration directory
- application configuration directory
- current working directory
- \$LIB
- \$PATH

Best regards,

Honza

PS: I took this information from older notes, I haven't checked if it is still 100% true - but I'm pretty sure at least some of it should work :)
