Silly question, but I have to ask first: Do you have PdfDraw added to your package? :) You'll also need RichEdit, plugin/jpg and obviously CtrlLib, as all of them are used by UWord.

Hi Honza,

thanks for reply. In this matter the question are never silly.

To say the truth I missed the plugin/jpg :blush: . After adding it unfortunately nothing changed and the error remained.

I attach a screenshot of the pachage list of my app and of UWord.h.

In the next post I attach the principal .h of my package. I suspect the problem is in some collision with this include file.

Thanks a lot, Luigi
