mirek wrote on Thu, 31 July 2014 17:32besides the width problem (and I have 1600 screen on notebook and 1920 on desktop), the other problem is that it is IMO good to see the name as first thing on the line.

Of course it is better! And I have a solution for you: you need to add return type and/or namespace ONLY in case of disambiguation, if you have items with similar signatures. In all other cases all you need is name of item, which will be draw first in line while fitting into single line.
