I am happy to announce that another functionality gap is being resolved:

theide is now able to debug 64-bit windows apps compiled with MSC compiler.

In order to do so, you need to compile 64-bit ide; that is then able to debug both 64-bit and 32-bit apps.

As this is new, it is possible that something is still broken, I also plan to do some more improvements with debugger. Please report any problems....
