Hi Koldo

koldo wrote on Sat, 16 August 2014 10:44 Now a new user that wants to install U++ in Linux would go to Download page. Following that link s/he will go to different Launchpad pages with many options ...

This is her/his first and probably last mistake... There is no need to go to launchpad at all. In fact, the download page contains a link to simple step-by-step guide that shows how to install U++ on ubuntu in 3 simple steps. If you think the download page is not clear enough, please feel free to update it to put more emphasis on this link.

koldo wrote on Sat, 16 August 2014 10:44 It would be great if we could set an easier way to link from U++ download page directly to a single .deb that works.

No, that is not a good idea. In fact it is exactly what lead you into problems. Downloading .deb files and installing them in most cases effectively bypasses the package management in ubuntu. This is why you were missing all the \*-dev packages. They are listed as dependencies in the upp package, so if you would install this package correctly from the PPA through apt-get/aptitude/synaptics/..., it would also install all the dependencies.

Best regards,  
Honza
