Thanks for your response mirek, unfortunately we have to use uppsrc_2010 and there is only one HttpRequest class in Web/httpsrv.h, which is obviously not the one you mean ;)

Is there any ssl support in 2010 sources?

Or is it possible to simply copy HttpRequest + TcpSocket class from uppsrc_2012 to uppsrc_2010?

And what "OpenSSL .dlls" do you mean?

Thanks again.

//edit: We found Web/SSL and included Web/SSL/WebSSL.h, which includes HttpClient class... hope this gonna work too ;)

//edit2: Haha, this is a nice one: <http://www.ultimatepp.org/forums/index.php?t=msg&th=5203> &

//edit3: Okay... Because I don't think there's any answer coming back, I close this thread now. For anybody who faces the same problem, use the class HttpClient in Web/SSL as I mentioned above, this works pretty fine. (Theres a heap leak but who cares ^^)
