Subject: Latest TheIDE builds fail to execute under FreeBSD Posted by Mindtraveller on Sun, 31 Aug 2014 22:45:08 GMT View Forum Message <> Reply to Message

I have rather old version of TheIDE (oct'2013) running under FreeBSD 9. After updating sources to latest build 7629, I've tried to rebuild TheIDE. New executable fails to start with message: Quote:terminate called after throwing an instance of 'Upp::LoadingError'

After renaming ~/.upp/theide directory, TheIDE starts with 'Initial setting wizard'. Acfter setting 'Manual' sources management, I recreate sources assembly for work projects. Opening any existing package again leads to TheIDE crash with message: Quote:terminate called after throwing an instance of 'Upp::Parser::Error'

Trying to create new project in the newly created assembly leads to TheIDE crash with the same error message.

Is there any idea how to make TheIDE work, or should I use debugger to help fixing this bug?

P.S. Please feel free to move this topic to any suitable subforum.
