Hi,

the search field can not get the focus with keyboard shortcuts.

Solution:

file FindReplace.cpp, Line 520

```
void CodeEditor::OpenNormalFindReplace0(bool replace)
{
    if(GetLength() > 1000000)
        findreplace.incremental <=<= false;
    findreplace.Setup(replace);
    findreplace.find.SetFocus();           // <----- move this line
    findreplace.itext = GetI();
    findreplace.prev.Show();
    findreplace.next <=<= THISBACK(DoFind);
    findreplace.close <=<= THISBACK(EscapeFindReplace);
    if(!findreplace.IsOpen())
        InsertFrame(FindFrame(sb), findreplace);
    WhenOpenFindReplace();
}
```

moving the line `findreplace.find.SetFocus();` to the end of function resolve the probleme.
