Hi,

I'm trying to compile the latest UPP tarball on a 64 bit Linux Mint 17 Qiana and ran into an error building from the command line. Can someone help?

```
g++ --version = g++ (Ubuntu 4.8.2-19ubuntu1) 4.8.2
```

So far I've installed additional libraries to resolve some build errors like missing header files.

Linux: install build-essential package

Linux: install zlib-dev

Linux: install libghc-gtk-dev

make from command line now produces the following error, which I don't know how to resolve:

Where should I look to try and resolve this issue?
