cbpporter wrote on Wed, 17 September 2014 15:12 Tested with latest nightly, does not work.

I'm writing 6 charters to the console, two of them being <128 and I get an output file of 29 bytes which interpreted as UTF8 shows 16 glyph.

TheIDE is still doing some conversion on the output.

As a test try to write 0xC0 in the console using Utf8 and you should get Å (A with an accent) both in the opened up console and when you are redirecting to a file.

Can you show me the code please? I know it sounds trivial, but there are more interpretations to this...

PS: The latest nightly really can't debug at all. Everything is 0.

Well, it works for me most of time, but I have to admit sometimes something weird happens here too. But never for long enough to actually debug it.

Perhaps you can join (and test) in this thread:

[http://www.ultimatepp.org/forums/index.php?t=msg&th=9043 &start=0&](http://www.ultimatepp.org/forums/index.php?t=msg&th=9043&start=0&)

I believe we are very close to catching the problem now... (really, the source of problem is that Win32 symbol API is not well documented).

Mirek
