Hello Koldo,

Thank you for patching in SVN 7697 and your effort to solve this issue. Sorry :(to say that I have still the error message box "no entry point of inet_ntop function in w2_s32.dll when compiling Sysinfo_demo_gui of Bazaar package. The computer on which I get this error is running WinXP pack service 2 and compiler is MSC9. No problem at all on my laptop running Under Win 7 and compiler MSC11.

I am not a specialist of IP management and internet features coding in C++ but I noticed that there still some call to inet_ntop in sysinfo.cpp without checking the Win version (see lines 697 & 692 in `Array<NetAdapter> GetAdapterInfo()` function).

Hope this could be helpful

Thanks again :)

Regards
