cbpporter wrote on Fri, 19 September 2014 14:33Maybe there should be an option at least to have no conversion, taking the data as is and giving the responsibility of interpreting the data to the caller?

Perhaps... but that will have to be on both sides.

I guess:

- ability to set Cout encoding (defaults to default console code page)
- ability to set LocalProcess encoding (again defaults to default console code page)

I guess that would do the trick, right?
