Hi Omnipraesens,

Welcome to the forum 8)

Omnipraesens wrote on Wed, 08 October 2014 03:01 Anyone have a clue why this might be?

/home/CENSORED/upp/uppsrc/Core/Defs.h:424:8: error: expected unqualified-id before string constant
extern "C" byte *i; \Hard to say without seeing the code, but my wild guess would be missing semicolon or similar syntactic error somewhere in your code, just before you use BINARY macro. By the way, what compiler are you using?

Best regards,
Honza
