```
struct ChildAppWindow : TopWindow {
 ChildAppWindow();
 bool IsStop();
};

bool ChildAppWindow::IsStop()
{
// how can i cat bStop ( In class MyAppWindow)?
}

struct MyAppWindow : TopWindow {
 MyAppWindow() ;

 bool bStop;
 void IsStop(bool& b) { b = bStop;}

 ChildAppWindow child;

};
```

One way is like below:

```
Callback<bool&> cb_IsStop;
child.cb_IsStop = THISBACK(IsStop);
```

but this is not so convenient i think
